A page, read aloud

A sheet of paper can be heard as well as seen.
This note is two pages. It lives in the app.
Nothing here is uploaded. Close the app and open it again. The same page is waiting.
Press Play. The voice reads one sentence, then the next. The line you hear is marked on the page.

Where the voice comes from

The voice is not inside this app. It is the Text to speech voice already on this computer. Install Offline TTS from the store if no voice is assigned yet. Then press Play again.
A scanned page is a picture of words. There is nothing to read aloud, and the app says so.
